CIPHER FOR "ANDERSON" TO BE MODELLED ON THAT USED BY "BENNS" (1942)

From: LOSCOFF

To: STOCKHOLM

No: 223

25 Mar. 42

To AKLSTO[1].

The cipher for "ANDERSON" (ii) is made up on the principle of "BENNS" (iii) cipher: the primary encrypted text is in Swedish using the 26 letters of the Latin alphabet. At the end of the code table [B] there are two punctuation marks (full-stop and comma) as well as a word separator. The three digits appearing over the fifth, seventh and tenth letters of the keyword (a) are used for the diacriticals. To generate the key [b] the letters from the novel ✓[KNIGA][c] are substituted only by the consonants at the heads of the columns. The key starts at the [B] first letter of the word used as the keyword.

The first indicator is added to the second group from the beginning multiplied by seven[d]. It is put at the fifth position from the beginning of the telegram. The second indicator is added to the third group from the end multiplied by nine[d]. It is put at the seventh position from the end. The service group [e] is added to the last group of the telegram and put at the end of the telegram.

The novel [KNIGA][c] CHISLING RA... [4] [16 groups unrecoverable]
